

# 240v Siren Timer Wiring Diagram

240v is supplied to the relay power (terminals L & N as shown)

The Active is then looped to the relay contact at the bottom (terminal 18)

Then another active from terminal 15 (NO) runs to the active of the siren

The green MAN button on the timer cycles between OFF, ON & AUTO.

Choosing ON will activate the siren to test the connection.

After that, choose AUTO to turn on the siren schedules
